```
# httpd.conf
PerlModule ModPerl::RegistryBB
Alias /perl/ /home/httpd/perl/

## 1.2 Description

ModPerl::RegistryBB is similar to ModPerl::Registry, but does the bare minimum (mnemonic: BB = Bare Bones) to compile a script file once and run it many times, in order to get the maximum performance. Whereas ModPerl::Registry does various checks, which add a slight overhead to response times.
